-  Anti-reflective treatment on both sides
-  Automatic
-  Chronometer
-  Co-Axial escapement
-  Sapphire crystal
-  Sapphire crystal case back
-  Titanium

WATCH FUNCTIONS

The crown has 3 positions:

1. Normal position (wearing position): when the crown is positioned against the case, the crown ensures that the watch is water-resistant.

Occasional winding: if the watch has not been worn for 44 hours or more, wind it up with the crown in position 1.

2. Correcting the date: pull the crown out to position 2, turn the crown forwards, then push the crown back to position 1.

NB: the date cannot be corrected between 8:30 pm and 1 am.

3. Time setting: hours – minutes – seconds. Pull the crown out to position 3. The seconds hand will stop. Turn the crown forwards or backwards. Synchronise the seconds by pushing the crown back to position 1 to coincide with a given time signal.

Timing to 1/8 of a second for up to 12 hours.

Note: resetting/zeroing of the sub dials must only be carried out after the chronograph has stopped. Never push the chronograph's two pushers (A and B) simultaneously.
